Introduction to the Design and Analysis of Algorithms

In computer science, divide and conquer is an algorithm design paradigm based on multi-branched recursion. A divide-and-conquer algorithm works by recursively breaking down a problem into two or more sub-problems of the same or related type, until these become simple enough to be solved directly. The solutions to the sub-problems are then combined to give a solution to the original problem.

In computational complexity theory, an NP-complete decision problem is one belonging to both the NP and the NP-hard complexity classes. In this context, NP stands for "nondeterministic polynomial time". The set of NP-complete problems is often denoted by NP-C or NPC.. Although a solution to an NP-complete problem can be verified "quickly," there is no known way to find a solution quickly.

Unter einem Sortierverfahren versteht man in der Informatik einen Algorithmus, der dazu dient, ein Tupel (i. A. ein Array) zu sortieren. Voraussetzung ist, dass auf der Menge der Elemente eine strenge schwache Ordnung definiert ist, z. B. die lexikographische Ordnung von Zeichenketten oder die numerische Ordnung von Zahlen.. Es gibt verschiedene Sortierverfahren, die unterschiedlich effizient ...
