Major depressive disorder (MDD), also known simply as depression, is a mental disorder characterized by at least two weeks of low mood that is present across most situations. It is often accompanied by low self-esteem, loss of interest in normally enjoyable activities, low energy, and pain without a clear cause. People may also occasionally have false beliefs or see or hear things that others ...

Major depressive disorder - Wikipedia

Delirium affects an estimated 14% to 50% of all hospitalized elderly patients. At least 20% of the 12.5 million patients over age 65 hospitalized each year experience complications because of delirium.
